*Examiner's Statement of Reasons for Allowance*

1. The application filed June 22, 2001 in view of the primary reason for the allowance of independent claims 1, 10, 17, 23, 26, 27 and 28 are the inclusion of the limitation that pertains to the combination of all other claims. With respect to claim 1, recites an ink well defined proximate said ink expulsion mechanism and a nozzle formed as an egress from said ink well; and a first pressure sensor that is formed substantially at said ink well and configured to detect pressure waves induced by a firing of said ink expulsion mechanism. With respect to independent claim 10, recites a cover plate spaced from said ink expulsion mechanism and having a nozzle formed therein, said nozzle being aligned with said ink expulsion mechanism; and a sensor mechanism formed on said substrate that is capable of detecting signals indicative of when said nozzle is clogged. With respect to independent claim 17, recites attempting expulsion of a volume of ink through a nozzle of a print head; detecting within said print head a firing quality related characteristic of a resultant pressure wave generated by said attempt to expel said volume of ink through said nozzle. With respect to independent claim 23, recites an interdigitated pressure wave transducer disposed on said substrate and having a directional detection characteristic whereby a pressure wave traveling in a predetermined direction from said at least one ink ejector is preferentially detected. With respect to independent claim 26, recited detecting a second magnitude of a pressure wave in the range of 15% to 25% less than said first magnitude whereby a misfiring nozzle may be detected. With respect to independent claim 27, recites establishing a first timing of an arrival of a pressure wave from an ejection of a predetermined volume of ink from a nozzle; and detecting a second timing of an arrival of a pressure wave in the range of 155

Art Unit: 2853

to 20% earlier than said first timing whereby a misfiring nozzle may be detected. With respect to independent claim 28, recites attempting expulsion of a volume of ink from a print head; detecting within said print head a magnitude and timing of a resultant pressure wave generated by said attempt to expel said volume of ink.

2. It is these limitation found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.
